1. Install mounting rails (Supplied by others.) through butterfly brackets on fixture.

2. Secure mounting rails to framing members. Ensuring bottom face of collar is a minimum of 3/4" from face of ceiling as shown in FIG A. (In case of custom custom fixture/order, please refer to submittal information for location.)

3. Wire fixture, make sure to leave power feed down through opening in collar.

5. Make power connection, install cassette and test with power.
